

Figge Art Museum

Davenport, Iowa, with the help of the Figge family, has become the home of one of the most advanced art museums in the United States. The plan was to construct a facility on the river's edge that would not only become home to local and international art, but also provide one of the grandest views of the Mississippi River from the downtown area. This art museum would be a \$49,000,000.00 multi-story facility, the likes that have never been seen in the Midwest. In fact, this art museum would be one of a kind in the United States with an exclusive exterior of glass, and an inside environment that would allow the display and storage of the rarest and most delicate art in the world. The new art museum, would replace the current Davenport Museum of Art located in Davenport, Iowa.

The Figge Art Museum seeks to be known as one of the most technologically functional art museums in the world. River Place Technologies, LLC was contracted to ensure that this goal was obtainable by communicating with a variety of international, national and local experts to deliver the following:

1. Protection of the art and artifacts
 - a. Verification of environment for protection of the art with timely reports and sensor validation
2. Comfort of the occupants
3. Economical operation
 - a. Review and minimize energy consumption
 - b. Refine automation to maximize performance of heating, ventilation and air conditioning system
4. Provide coordination for the service and maintenance of the HVAC equipment
5. Understand the operations of the security system and be able to communicate with vendors
